

RSV Information Sheet

PREVENTION

At home and Nursery Schools

- * Stay away from crowds
- * Avoid Smoke
- * Wash bedding, clothes, hands, bathrooms & door knobs regularly
- * Cleaning with a alcohol disinfectant will prevent the spread of the virus

FACT: RSV is a common, seasonal virus that is contracted by 100% of infants by the age of 2. When a baby contracts the virus, the entire family contracts it.

RSV

“Respiratory syncytial virus (RSV) is a common, and very contagious, virus that infects the respiratory tract of most children before their second birthday.

For most babies and young children, the infection causes nothing more than a cold. But for a small percentage, infection with RSV can lead to serious problems such as bronchiolitis, which is inflammation of the small airways of the lungs, or pneumonia, which can become life-threatening”

Is Fogging effective against RSV?

Fogging is effective if proper cleaning procedures are in place.

Sanitizing of hands and surfaces are maintained in all environments.

We suggest, using an all purpose cleaner such as Pureaway Aqua, an antibacterial hand soap & Alcohol based hand sanitizer such as sterispray or bactrojel and Fogging regularly.
